TAKE CONTROL OF YOUR FUTURE

May 2019 Newsletter

2019's equity rally continued strongly during the month of April, benefitting from corporate earnings that did not disappoint, signs of a rebound in economic growth especially in China, and stiffening of the commodity and housing markets. All major indices were up on the month, reaching a new record Friday: S&P 500 +3.7% (YTD +17.3%), DJII +2.4% (+13.8%) and NASDAQ +5.4% (+22.8%).

There are changes to all **EZTracker** portfolios as we look to get back to the **EZTracker** target allocations for each risk tolerance level. **Please see page 4 for detailed model portfolio adjustments.** This is also a good time to review your risk tolerance and assess whether you should be following our Aggressive, Moderate, or Conservative portfolios. S&P up 17% year-to-date! Does this mean anything? What can we expect for the remainder of the year?

Don't be fooled by the media reports rooting on market dominance this year. Left out is the fact that the stock markets also dropped over 14% between October and December – we have simply just returned to last September's levels – in fact, the S&P 500 is only up less than 1% since then. The key question is where are we heading and how should we be positioned.

The bulls say: Global growth should strengthen somewhat during 2H 2019 as growth is stabilizing in China (due to macroeconomic stimulus easing fears of a hard landing), coupled with the disruption of a 'hard, unorganized Brexit', joined by a substantially dovish stance by central banks across the globe, reversing the tightening that produced late 2018's drop.

The bears say: Corporate P/E ratios are high in many equity markets particularly in the US, which coupled with overcapacity in US commercial real estate and heightened risks associated with the scale of US corporate debt means even a modest negative shock or headline could trigger a correction. Furthermore, stronger US growth might prompt the Fed to reconsider remaining on the sidelines, and a Fed decision not to cut rates could come as a negative surprise. Finally, European growth remains very very fragile, and could be easily derailed by many developments.

EZTracker says: we are not afraid of either scenario as we continue our strategy of being in the best performing funds, invested for the long term – not the short or medium term. At this point we believe it is the right time to move toward our target allocations, and as such the **EZTracker** model portfolios are re-allocating funds into the market from more conservative instruments.

Corporate Earnings

Among the S&P 500 companies that have reported their Q1 earnings to date, over 76% have beaten their consensus EPS estimates, led by outsize earnings results in communications services, discretionary, energy and real estate.

Some examples of companies that announced better than expected earnings and enjoyed price bumps included: financial bellwethers JPMorgan Chase (JPM), PNC Financial Services Group (PNC) and Wells Fargo (WFC); Coca-Cola (KO) and United Technologies (UTX), defense giant Lockheed Martin (LMT), and Microsoft (MSFT). On the news, MSFT stock rose to near a record, past \$1 trillion in market cap, from its Q1 sales jump of 14%, driven mainly by MSFT's transition to the public cloud as more large businesses offload their servers and data storage to Microsoft's Azure.

Economic Data

Housing: Sales of new US homes unexpectedly rose in March, climbing to a 16-month high to cap the first quarter with a third straight increase, reflecting a boost from lower borrowing costs. Single-family home sales rose 4.5% to an annualized pace that topped all estimates. The surprisingly strong gain suggests lower mortgage rates and rising wages are helping the housing market. Still, other March data have been less upbeat, as existing home sales missed estimates, housing starts slumped, and the median sales price decreased 9.7% from a year earlier.

This week: All eyes is on the continuation of corporate earnings releases and the Fed, as they meet for their two day May meeting. With first quarter GDP growth at 3.2% but core inflation slipping to 1.7% from a 1.9% pace in the fourth quarter, a key question will be why strong growth is not leading to more inflation and if Fed officials are content to stay on the sidelines for now.

Sector Analysis

Financials, (+8.5%), Communications Services (+7.7%), Technology (+7.0%), and Consumer Discretionary (+7.0%) were the leading sectors for the last month. Defensive stocks made up the laggards, including Healthcare (-2.4%), Utilities (-1.5%) and Energy (-0.33%). Please note that **EZTracker** has changed our source of sector return data from Morningstar (which sector portfolios are not actually investable securities), to Sector SPDRs (which are in fact investable).

Oil

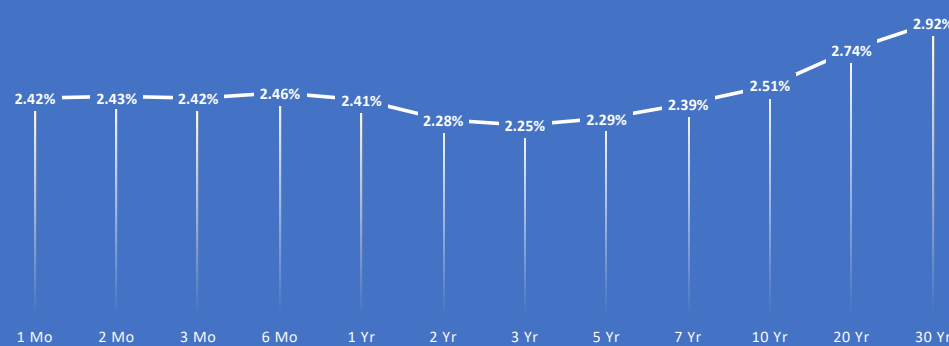

Oil prices hit their highest since November this week after Washington announced the end of all waivers on imports of Iranian crude, pressuring importers to stop buying from Tehran. The expectation is that Saudi Arabia and the UAE will fulfill their pledges to make up the difference. Barclays noted that the US decision was a surprise to many and would "lead to a significant tightening of oil markets". OPEC is set to meet in June to discuss output policy.

Rates & Yield Curve:

During the month of April, the treasury curve steepened significantly, with the spread between 10-year vs 2-year Treasury widening 0.07%. The investment implications of a widening yield curve should be bullish for equities. 10-year Treasury yields have been fairly volatile, trading in a range between 2.40%-2.60%, and closing the month at 2.51%. The recent bond rally (Prices up, yields down) in the past week came despite strong equity markets and stronger-than-expected GDP. Traders are pricing in weak inflation and possible Fed easing.

Your individual percentages may vary somewhat from those indicated above due to rounding, timing of purchases, and performance every month (In many cases even though there may be no changes for a particular month you may notice a small change, due to performance/rounding).

* Either selection is appropriate. If you experience a rebalance error, choose STABLE VALUE. (Money coming from the STABLE VALUE FUND must first be moved to another plan investment option for 90 days before it can be transferred to BROKERAGELINK and AA FED CREDIT UNION).
** Buy dates are the dates of the most recent purchases. Your buy and sell dates may be different - keep track of your dates.
All transactions in your 401k take place after the close of the market. You will see your newly updated portfolio the next day. Your individual percentages may vary somewhat from those indicated above. **Questions? Call American Airlines 401k Service Center at Fidelity at 1-800-354-3412.**

The EZTracker Brokerage Portfolio is a very aggressive approach for investors who want to invest in a wider range of market sectors. Managing this portfolio will require more time and greater comfort with risk than the other EZTracker portfolios. We suggest this portfolio for more experienced, knowledgeable investors. See the Monthly Fund Data in the appendix for a list of funds in this portfolio. If you are interested in using Fidelity's Self-Directed Brokerage Link, follow the instructions on the Fidelity website to set up your account or call the American representative at Fidelity (800-354-3412).

STEP 2: Update Future Investment Elections

Aggressive, Trend, Moderate & Conservative Portfolios: This is the money coming out of your paycheck each month and going into your 401k. Your future contributions should be set identical to your Current Investments in the above EZTracker Model Portfolio chart above.

Brokerage Portfolio: Set Future Investments for 95% to the Brokerage Link and 5% to AA FED CREDIT UNION. Then continue and set 100% of the Brokerage Link contributions to Fidelity Cash Reserves (FDRXX)
Our suggested approach:

- When adding one new position, add 50% of your cash balance to the proceeds of the fund you are selling.
- When adding two or more new positions, add 100% of your cash balance to the proceeds of the funds you are selling and split the dollar total equally in purchasing the new funds.

Morningstar Target Risk Index

The Morningstar Target Risk Index series serve as benchmarks to help with investment selections. They cover a global set of stocks, bonds and commodities. While not investable indices, they represent challenging benchmarks for long-term investing plans such as the EZTracker model portfolios.

Historical Performance

Any investment strategy should be measured one way: Results over time. Not one-week, one-month, not even one-year. While past performance is not a guarantee of future performance, our record has been excellent in delivering long-term returns. As with any long-term investing strategy, you should not expect dramatic short-term results to offset past losses.
